Safe, Effective Dentist Supervised Teeth Whitening

Tooth Whitening

Teeth whitening is one of the simplest and most effective ways of achieving a more attractive smile. During the process tooth discolouration is 'whitened' to a lighter shade using a professional procedure provided under the safe supervision of a member of the Ock Street Clinic dental team.

What we will do:

- One of our Ock Street Clinic dentists will examine your teeth to make sure they are suitable for tooth whitening
- Custom impressions will be taken of your teeth to make a bespoke whitening tray
- We will make an appointment for you to collect your teeth whitening kit from Ock Street Clinic
- You will be shown how to place the whitening gel in the tray and advised on how to use the kit. We will give you a schedule for its use, generally over two to four weeks
- We will review the shade of your teeth at the end of your first wearing schedule. We will advise you if you should top up your whitening at your routine dental examinations

Why whiten your teeth?

- Smile with more confidence
- A fresher look to your mouth & teeth
- Reduced stains & a brighter smile
- No damage to tooth structure
- Look years younger

The result, beautiful white teeth using dentist approved whitening kits tailored to your whitening requirements!
